**SK International** has been instrumental in the creation of several websites and with every project design we have surpassed the expectations of our clients. Our developers and graphics designers work in total synergy. Their objective is not just the look-and-feel but on the total user experience. From user interface to addressing user requirements and meeting application objectives, we ensure total customer delight.

We offer affordable websites & web based multimedia solutions for corporate and small to medium sized organizations. If you are looking to reach out to markets anytime, anywhere in the world with improved awareness about your company, we can help you to

- Deliver high quality websites at very reasonable costs.
- Develop layouts, design, program, host and maintain your website.

We encourage active participation from our clients. This in our experience helps create products that are better suited to appeal the target audience of any business.

We are of the opinion that the home page of a site should be very attractive. Since the index page is customer's first impression, visual elements used should be easy to understand, and do not distract the reader from delivering the right messages.

We give lot of importance to site navigation to ensure that the visitors to the web site can easily find what they are looking for on the site. We lay stress on consistency in design. The design is optimized to read well regardless of platform or browser. Value-added information is provided for visitors to the site and strategic hyperlinks are included to other appropriate sites.

Our website designers can develop and design sites to suit your budget and business requirements. We provide site maintenance services, which could include periodic modifications to text and/or product images or addition of new pages.

**We offer a vast array of website design and development services. Some of them are listed below:**

- Domain name registration
- Web site hosting
- Designing static as well as dynamic sites
- Site analysis and testing
- Submission to search engines
- Site promotion
- Web site maintenance
